                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cDNA libraries were constructed from the mouse osteoblastic cell '
line MC3T3-El and from mouse liver tissue, amplified by PCR, and
then as much common DNA as possible removed by hybridisation between
the 2 libraries. Residual El-specific DNA was amplified, inserted
into lambda gt10 and screened by plaque hybridisation. A minibank of
273 E-specific clones was recovered, their inserts amplified and
cused to screen total RNA from both cell types. One clone specific
for El was identified and sequenced. The insert from this clone was
used to screen cDNA prepd. from El RNA and the longest posn. insert
cloned in pGEM 112f (+) to give pKOT154. This insert was sequenced;
it encoded the 796 AA mouse procursor protein (Q44391/R49730). The
insert was also used to screen a cDNA bank prepd. from human
osteosarcoma to identify 2 clones encoding the 2 human precursor
proteins - QSF-4-1 and QSF-4-2 (Q44392/R49731 and Q44393/R49732
                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cor with MORT binding proteins such as McA (CASP-10) and MACH (CASP-8), and thereby of binding to the intracellular domain of the FAS-R receptor, to which MORT binds, or of binding to the intracellular domain of the p55 tumour necrosis factor (TNF) receptor, to which TRADD binds and to which TRADD protein MORT-1 binds. Hence, they are considered as mediators or modulators of the signal to role in e.g. the signalling process that is initiated by the binding of FAS ligand to FAS-R, and also having a role in the signalling process that is initiated by the signalling process that is initiated by the signalling process to to regulate cell death or inflammatory processes. (II) is used to regulate cell death, and its inhibitors augment/enhance the processes. (I) and (II) regulate the FAS-R ligand or TNF effect on cells carrying an FAS-R or p55-R. Tumour, HIV-infected or other diseased cells can be treated using a viral vector encoding a viral sequence encoding (II), which kills the cell antisense oligonucleotides, introduced using the above vector, block the expression of (II) and can also regulate the above effects. These

It was isolated from a human skin fibroblast cDNA library using a cDNA probe corresponding to the G1 sequence. G1-beta (also called CASH beta, CASH being caspase homologue) and a longer isoform, G1-alpha (see W78903), represent 2 splice warriests of the G1 protein whose G1 warriests of the G1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  variants of the Gl protein. These Gl proteins are capable of binding to, or interacting directly or indirectly, with MORT-1 or with MORT-binding proteins such as well.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA encoding isoforms of G1 protein which bind MORT-1 - and regulate the effects of FAS and tumour necrosis factor receptors, useful for killing of cells e.g. HIV and cancer cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-MAY-1997;

The present invention describes new human secreted proteins which were isolated from adult placenta, adult retina, foetal kidney, adult blood, adult brain, adult thyroid, adult bladder, adult neural continues adult testes, and adult lymph node cDNA libraries. The human content proteins, and the polynucleotides encoding them, are predicted to have biological activities which would make them suitable for the content proventing or ameliorating medical conditions in humans and continues. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating conditions. Suggested activity, activity, hammatopoiesis regulating conditions, as vaccines or suppressing activity, hammatopoiesis regulating conditions. It is not continue activity, the condition activity, hammatory activity, receptor/ligand activity, hammatory activity. Conditions in the condition activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for gene conditions. Active in the present human secreted proteins, and V5298 to the conditions.

                   The patent discloses a method for identifying genes that enhance levels of disease resistance if expressed in susceptible plants. The method is useful for isolating disease resistance genes (R gene) in plants. These genes confer non-host disease resistance to plants by responding to avirulence genes in plant pathogens. The R-genes identified trigger a hypersensitive response (HR) in tobacco that is dependent on the presence of the Phytophthora infestans ellcitor INF1. The genes are useful for generating pathogen-resistant transgenic plants. They can be used to e.g. Phytophthora, Exisyphe and Puccinia. The present sequence is TOB-F12 gene encoding a homologue of the 21kDa protein of Daucus carota. Expression of this gene was shown to partially control wild fire disease of tobacco.
                                                                                                                                                                                                                     expressing plants -

               human c-myc promoter Pl. A full length FBP cDNA sequence was assembled from overlapping clones obtd.from CDNA libraries. Source RNAs were from undifferentiated HL60 cells, the B lymphona cell line, BJAB, and PMA/PHA stimulated pooled human peripheral blood lymphocytes (PBLS). A composite cDNA is given in Q68909 and the deduced polypeptide sequence, (67.5 kd mol. wt.) is given in R58813. Three clones from a BJAB cDNA library and three clones from an activated human PBL cDNA library contain the sequence in Q68909. Three clones from the same BJAB library and two clones from the same blab library and two clones fro

                   DROME (DNA-binding regulator of c-myc expression) and FUSE (far upstream element) binding protein (FBP) are synonymous. A FUSE which is required for maximal transcription of c-myc binds a factor (DROME or FBP). The activator cis-element is approx. 1500 bp 5' of the human c-myc promoter Pl. A full length FBP cDNA sequence was assembled from overlapping clones obtd.from cDNA libraries. Source RNAs were from undifferentiated HL60 cells, the B lymphoma cell line, BJAB, and pMA/PHA stimulated pooled human peripheral blood lymphocytes (PBLs). A composite cDNA is given in Q68909 and the deduced polypeptide sequence, (67.5 kd mol. wt.) is given in R58813.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1616

This invention describes novel human genes (see 200410-200477) and the secreted proteins (see Y25711-Y25778) and fragments (see Y25779-Y25907) they encode. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 67

                                                                                                                                       The present invention specifically describes human DNAX toll-like! receptors 2 to 10 (DTLR2-10). The present sequence encodes partial human DTLR7 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) are seen to produce the DTLR proteins. The DTLR proteins can be used to produce the DTLR proteins. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunity responses or morphological effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                putative', '-like' or 'similar to'. Genes that have EST 'unknown proteins'. Genes that are described as 'unknown proteins'. Genes that are annotated based only on gene prediction software are described as 'hypothetical proteins'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge, http://gnomic.stanford.edu/-chris/GENSCANW.html), Fexa (V.Solovyev & A.Salamov, Sanger Centre, http://genomic.sanger.ac.uk/), and NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of Denmark,http://www.cbs.dtu.dk/NetPlantGene.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               On Dec 30, 1998 this sequence version replaced gi:2734094. Bases 1-9262 of clone F21M11 overlap with bases 68998-78259 of 'TAMU' BAC clone F20D22 (ACO02411) and bases 119525-119914 of F21M11 overlap with bases 1-389 of 'TAMU' BAC clone F21B7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genes with similarity to proteins

It currently consists of 8 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
